

Project Design Phase-I - Solution Fit Template

Project Title: Emerging Method For Early Detection Of Forest Fires

Team ID: PNT2022TMID51601

Define CS, fit into CC	<div>1. CUSTOMER SEGMENT(S)<div>CS</div></div> <div>Forest officer Common people</div>	<div>6. CUSTOMER CONSTRAINTS<div>CC</div></div> <div>Satellites allow for detecting and monitoring a range of fires , providing information about the location, duration, size, temperature, and power output of those fires that would otherwise be unavailable. Satellite data is also critical for observing and monitoring smoke from the fires</div>	<div>5. AVAILABLE SOLUTIONS<div>AS</div></div> <div>Avoid burning wastes around dry grass. Obey local laws regarding open fires, including campfires Have firefighting tools nearby and handy. Use fire resistant roofing materials. undertake technical checkups regularly. Monitoring weather analytics, monitoring thermal anomalies, monitoring water stress and temperature rises.</div>	Explore AS, differentiate
	<div>2. JOBS-TO-BE-DONE / PROBLEMS<div>J&P</div></div> <div>Satellite remote sensing offers a useful tool for forest fire detection, monitoring, management and damage assessment. During a fire event, active fires can be detected by detecting the heat, light and smoke plumes emitted from the fires. This application uses real-time satellite data to detect and monitor forest fires (sending alerts to mobile devices), and understand fire patterns.</div>	<div>9. PROBLEM ROOT CAUSE<div>RC</div></div> <div>Forest fires cause lots of damage, some of them are – loss of wildlife habitat, extinction of plants and animals, destroys the nutrient rich top soil, reduction in forest cover, loss of valuable timber resources, ozone layer depletion, loss of livelihood for tribal people and poor people, increase in global warming..</div>	<div>7. BEHAVIOUR<div>BE</div></div> <div>When the people don't have knowledge about forest fire</div>	
Focus on J&P, tap into BE, understand RC				Focus on J&P, tap into BE, understand RC

<div>3. TRIGGERS</div> <div>TR</div> <div>Human-caused fires result from campfires left unattended, the burning of debris, equipment use and malfunctions, negligently discarded cigarettes, and intentional acts of arson.</div>	<div>10. YOUR SOLUTION</div> <div>SL</div> <div>For this problem we use image processing and video analysis so by using satellite image processing we can able to find the fire at the early stage and stop spreading fire in the forest .</div> <div>This model is mainly build by using CNN and machine learningand deep learning</div>	<div>8.CHANNELS of BEHAVIOUR</div> <div>CH</div> <div>ONLINE: fire alert sensor</div> <div>OFFLINE: Fire awareness program</div>
<div>4. EMOTIONS: BEFORE / AFTER</div> <div>EM</div> <div>BEFORE : unsafe and worries about lives and belongings</div> <div>AFTER : safety and relief</div>
